

- Hello hello! This is the file for our improvements!

To start, the prototype is a great foundation for us, and will be our backbone but it does require improvements

First, i would address the UI and then move unto the functions so we know what to do with everything

notification

These are a few examples of a good reference on how I would love the app to look like

- A + icon in the middle to record either inflow or outflow
 - A place at the top where you could have a wallet choice (ex. Wallet 1, wallet 2, debit card etc.)
 - But at the same time we still keep the streaks, the gamified experiences, the goals, the badges

Talking about the badges and challenges this could be like passive. Where users don't have to join them but instead have the system track the accomplishments automatically and once they've done it or accomplish it(intentionally or unintentionally) they are given a badge and

Here's an example of how I think the + icon add income/add expense should look like once pressed.

Here's also a good reference on how an income category would look like

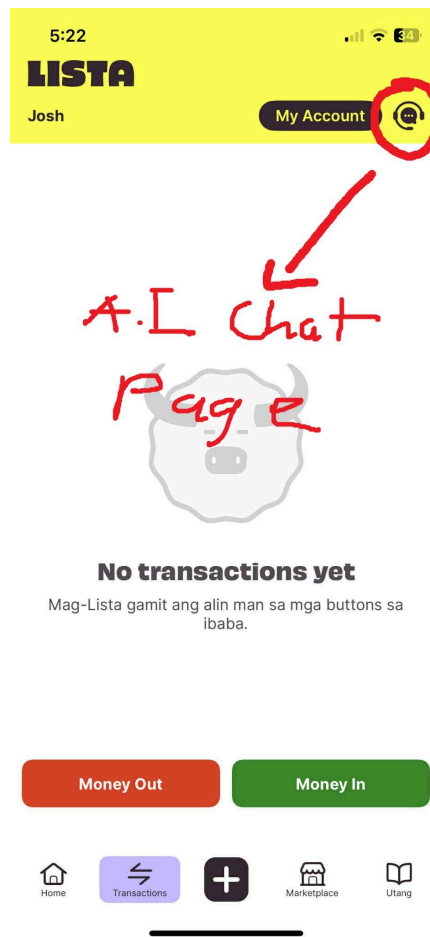

Again, these are just some apps we could get ideas from and then rebrand and redo it our style.

The most important part of our APP is our differentiator.

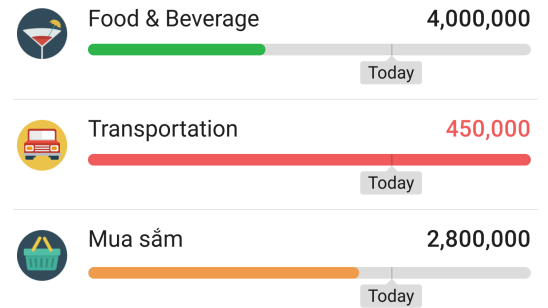

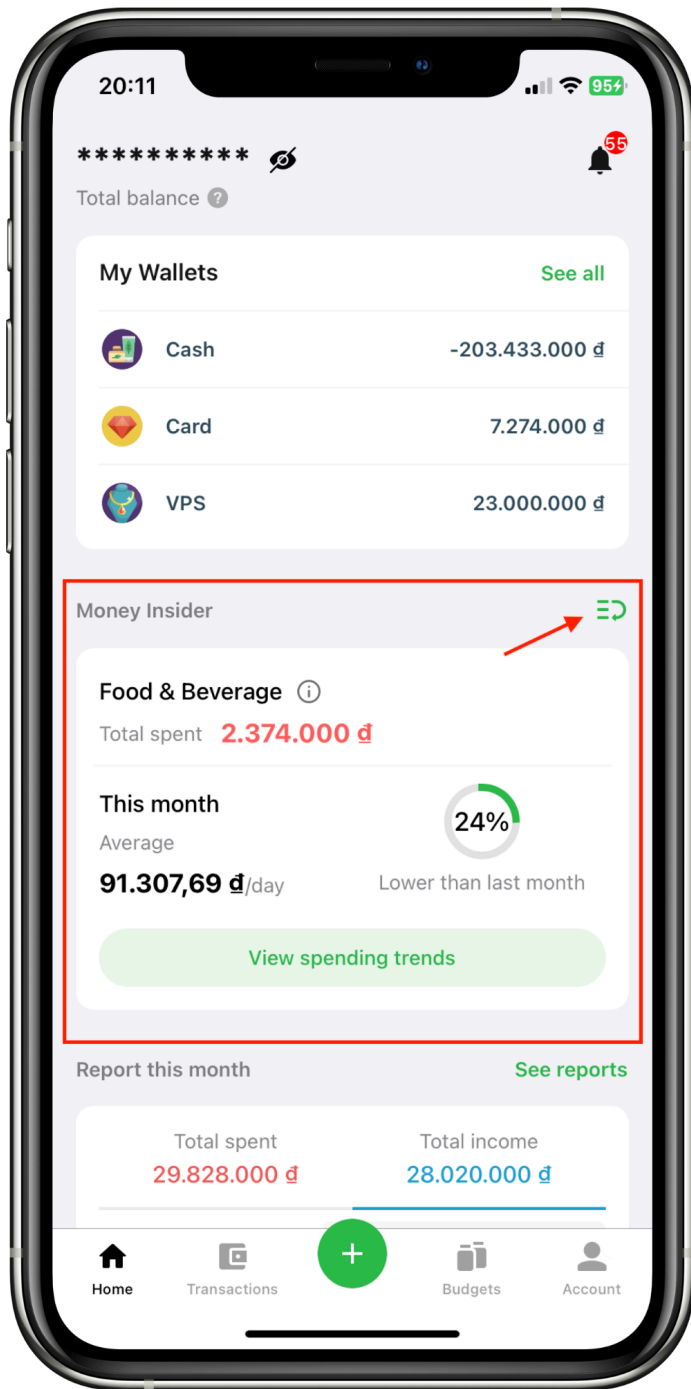

Which are:

- It's gamified, friendly, motivating
- It's gonna be tailored specifically to the filipino (but will have an english/international option)
- And it will have a AI chat financial coach
- It will make saving/taxing easier

Here's an example on where i think the AI icon would fit the best

And my accounts could have the badges in

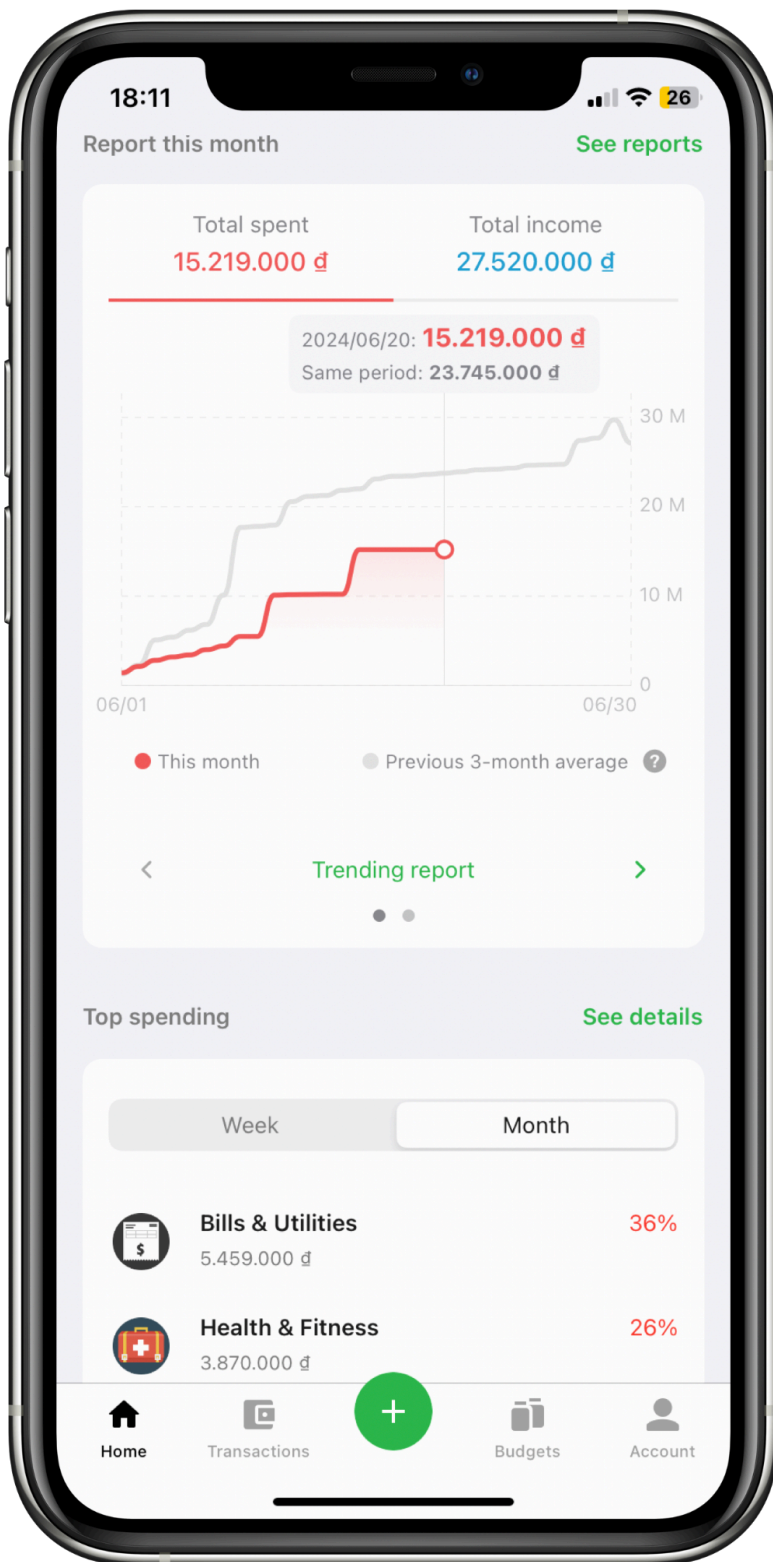

Here's how i really want the app to end up looking like while including our streaks around the middle area.

It'd be fun if we highlight streak progress more playfully (flames, confetti, badge when you beat your best streak).

Also we could make **Savings Goals** more motivational → thermometer-style progress bar, fun animations when reaching milestones.

Adding Cultural Filipino touches: small motivational Tagalog phrases below each section ("Konting tiis, Josh! Ipon na malapit na!") (translation: just endure it a bit more Josh, you're almost there)

It would also be amazing if we could use **visual charts** (pie/bar) for categories instead of plain text for the summary
